Bringing Quality Education Closer to People

NURSING CARE PLAN

Name of Patient: _____ **Age**: _____ **Gender**: _____ **Room & Bed No.**: _____ **Allergies**: _____

Chief Complaint: _____ **Admitting Diagnosis**: _____

Assessment	Nursing Diagnosis w/ Scientific Basis	Objectives of Care	Nursing Interventions	Rationale	Evaluation
Subjective Data: Residents may report difficulty disposing of household garbage properly. **Objective Data:** Improperly disposed garbage may be observed in open areas, drainage canals, or near homes **Needs:** Health education, proper waste segregation, accessible waste collection, and community participation.	Ineffective Community Health Management related to inadequate waste disposal practices and limited environmental sanitation awareness. Accumulated waste can attract flies and rodents and contribute to environmental contamination.	Short-term: Within one week, residents will identify at least three proper waste disposal practices. Long-term: Within one month, residents will demonstrate improved waste segregation and proper disposal practices.	1. Assess household waste disposal practices in the community. 2. Educate residents about waste segregation and proper disposal.. 3. Encourage household waste segregation using labeled containers. 4. Coordinate with barangay officials regarding waste collection and disposal. 5. Organize a community clean-up activity.	Identifies existing practices and areas needing improvement.. Improves knowledge and encourages safe practices. Helps separate biodegradable, recyclable, and residual waste. Supports an organized and sustainable waste management system. Reduces accumulated waste and promotes cooperation.	The residents were able to identify proper waste disposal practices, demonstrate waste segregation, understand the importance of maintaining a clean environment and participate in community clean-up activities.
